INTERNSHIP REPORT

WEB DEVELOPMENT

Prepared for	Sagar Chachondiya
Organization	Thiranex
Internship Period	31 July 2026 – 30 August 2026
Certificate ID	THX-JUL3126-494

Submitted as a summary report of the Web Development internship stated in the supplied certificate.

Prepared using the certificate details provided. Specific projects, tools, and assigned tasks were not listed in the certificate; relevant sections below are therefore written as a general internship report and should be edited to match the actual work completed.

1. Introduction

Web development is the process of creating and maintaining websites and web applications. It combines page structure, visual design, user interaction, and—where required—server-side logic and data handling. This report documents the Web Development internship completed by Sagar Chachondiya at Thiranex, as confirmed by the supplied certificate.

2. Internship Details

Field	Information
Intern	Sagar Chachondiya
Organization	Thiranex
Internship area	Web Development
Period	31 July 2026 to 30 August 2026
Certificate ID	THX-JUL3126-494
Certificate signatory	Hariharan M, Founder & CEO

3. Objectives of the Internship

The general learning objectives for a Web Development internship may include:

- Understand the basic workflow of website development.
- Learn how web pages are structured and styled.
- Practise creating clear, usable, and responsive page layouts.
- Improve problem-solving, debugging, and attention to detail.
- Develop professional habits such as following instructions, managing time, and documenting work.

4. Overview of Web Development

Web development commonly involves the following areas. These are included as background for the internship field and are not a claim that each technology was used during this particular internship.

Front-end development

The front end is the part of a website users see and interact with. HTML defines page structure, CSS controls presentation and layout, and JavaScript can add interaction and dynamic behaviour.

Back-end development

The back end handles server-side operations such as processing requests, applying application logic, managing authentication, and communicating with databases when a project requires them.

Responsive design and testing

Responsive design helps a website adapt to different screen sizes. Testing checks that links, forms, layout, and interactive elements behave as intended across supported devices and browsers.

5. Possible Work Activities

Typical activities in a Web Development internship can include reviewing requirements, building or updating page layouts, improving styling, testing pages, identifying display issues, and making revisions based on feedback. The certificate does not specify Sagar Chachondiya's exact assignments, so this section describes common activities rather than confirmed tasks.

6. Skills and Learning Outcomes

A Web Development internship can help a learner strengthen the following skills, depending on the work assigned:

- Technical understanding of website structure and styling.
- Awareness of usability, accessibility, and responsive layouts.
- Debugging and systematic problem-solving.
- Communication and receiving feedback.
- Time management, consistency, and attention to detail.

7. Challenges and Improvement

Common challenges in web development include maintaining consistent layouts, making pages work on different screen sizes, locating errors, and ensuring that interactive elements behave correctly. A useful approach is to break a problem into smaller steps, test changes one at a time, use browser developer tools where appropriate, and ask for feedback when requirements are unclear.

8. Conclusion

According to the supplied certificate, Sagar Chachondiya successfully completed a Web Development internship at Thiranex from 31 July 2026 to 30 August 2026. The internship field provides an opportunity to understand how websites are planned, developed, tested, and improved. This report provides a structured overview of that field; the exact tasks and project outcomes should be added from the intern's own experience for a fully individualized final report.

9. Certificate Reference

This report is based on the certificate provided by the user. The certificate states that Sagar Chachondiya successfully completed an internship in Web Development during the period noted above and identifies the certificate as THX-JUL3126-494. It is signed by Hariharan M, Founder & CEO.

Intern Name: Sagar Chachondiya
Certificate ID: THX-JUL3126-494
Report note: Add actual project title, technologies used, and assigned tasks if required by the institution.
